ATLAS

Bryan Caron - ATLAS Computing Grid 6

Objectives of ATLAS and LHC

- One of the principle objectives: **Discover the Higgs particle**
 - Existence is fundamental to the Standard Model and many particle theories
- Some of the most fundamental questions in physics still to be answered:
 - What gives particles masses?
 - Why are there 3 types of quarks and leptons?
 - Are there more types of particles and forces to be discovered at higher energies?
 - How can gravity be incorporated into the Standard Model?

Bryan Caron - ATLAS Computing Grid

7

LHC Data Challenge

- A particle collision = an event
- 40×10^6 collisions/second
- Our goal is to count, trace and characterize all the particles produced and fully reconstruct the process.
- After filtering, 100 collisions of interest per second
- > 1 Megabyte of data digitised per collision
recording rate > 1 Gigabyte/sec
- 10^{10} collisions recorded each year
stored data > 10 Petabytes/year of data

1 Megabyte (1MB)
A digital photo

1 Gigabyte (1GB)
= 1000MB
5GB = A DVD movie

1 Terabyte (1TB)
= 1000GB
World annual book production

1 Petabyte (1PB)
= 1000TB
Annual production of one LHC experiment

1 Exabyte (1EB)
= 1000 PB
3EB = World annual information production

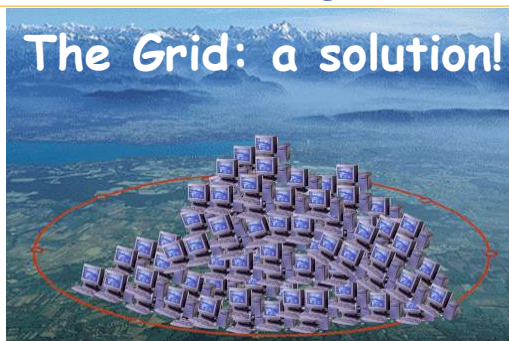

LHC Processing Challenge

LHC data analysis requires a computing power equivalent to ~ 100,000 of today's fastest PC processors!

Where will the experiments find such a computing power?

Nowhere near enough at CERN!

Bryan Caron - ATLAS Computing Grid

9

What is the Grid?

- The name Grid is chosen by analogy with the **electric power grid**:
 - plug-in to computing power without worrying where it comes from.
- The **Grid** is an emerging infrastructure that provides:
 - seamless access to computing power
 - data storage capacity distributed over the globe.
- The Grid is, for the time being, **many Grids**
- Grids are a framework for **Resource Virtualisation**
- Grids will rely on new models of **Inter-Organisational Security**
- Grids will be used by **Virtual Organisations**
- Grids are a platform for **Resource Discovery**
- Grid Services will be based on **Web Services**

Grid development has been driven by the **academic community**
Industrial variants are **on-demand computing**, **Utility computing**

Bryan Caron - ATLAS Computing Grid

10

How does (should) it work?

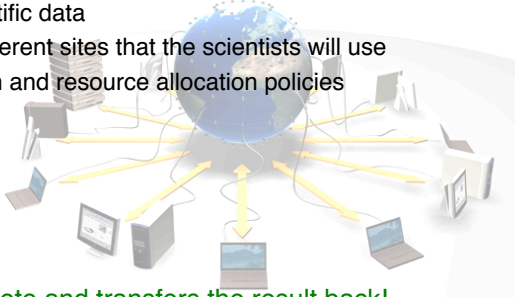

- The Grid relies on advanced software, called **middleware**, which ensures seamless communication between different computers and different parts of the world

The GRID middleware:

- Finds convenient places for the scientist's computing task to be run
- Optimises use of the widely dispersed resources
- Organises efficient access to scientific data
- Deals with authentication to the different sites that the scientists will use
- Interfaces to local site authorisation and resource allocation policies
- Runs the jobs
- Monitors progress
- Recovers from problems

... and

Tells you when the work is complete and transfers the result back!

Bryan Caron - ATLAS Computing Grid 11

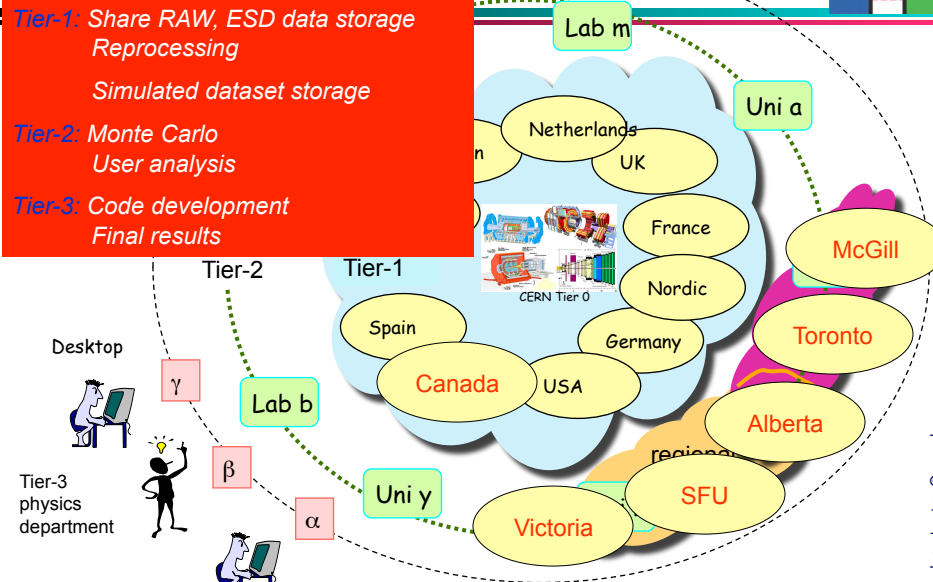

Worldwide LHC Computing Grid

Tier-0: storage of RAW dataset
Initial reconstruction (ESD, AOD)

Tier-1: Share RAW, ESD data storage
Reprocessing
Simulated dataset storage

Tier-2: Monte Carlo
User analysis

Tier-3: Code development
Final results

Bryan Caron - ATLAS Computing Grid 12

The Canadian Computing Model

- Tier-1 at TRIUMF:
 - Raw data storage; event reconstruction; expert personnel
 - Dedicated facility funded through CFI-EOF (2007-2011)
- Tier-2 Centres in the Universities:
 - East (Toronto, McGill) and West (UVic, SFU, Alberta) Tier-2 Federations
 - Monte Carlo simulation & physics analysis
 - Organized and independent user access patterns will have peaks and valleys
 - Will use shared facilities in the HPC Consortia (CFI-NPF)
- Resources for common ATLAS contributions and additional Canadian-only use
 - Grid-accessible cpu and storage for Canadian ATLAS users

3 – 4 PB of raw data + 2.5 PB of secondary data generated each year
(200 Hz, 14 hours/day, 200 days/year for nominal operations)

Canadian share/responsibility is 5%

Bryan Caron - ATLAS Computing Grid

13

Keys to Grid Usability

- Building a production level infrastructure
 - Building robust services
 - Building a good operations strategy
 - Providing support
-
- Grid Computing Infrastructure
 - Distributed Data Management
 - Large Scale Distributed Analysis
 - Operations and Monitoring

Bryan Caron - ATLAS Computing Grid

14

Grid Computing Infrastructure

Bryan Caron - ATLAS Computing Grid 15

ATLAS Resource Requirements

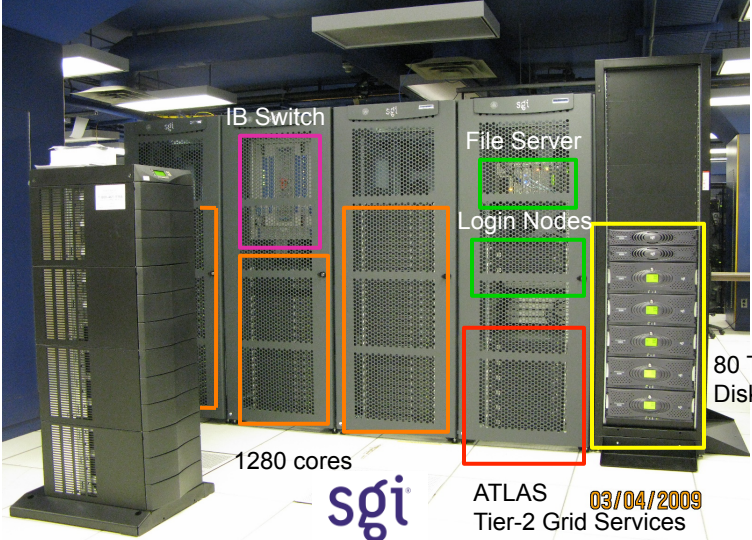

- TRIUMF Tier-1 Centre
 - 1210 cpu slots,
 - 2.1 PB disk (usable),
 - 1.6 PB tape
- Tier-2 Centres (Sum)
 - ATLAS Canada
 - WLCG commitment is approx. 5% of totals

<i>Tier-2 CPU (kHS06)</i>	<i>Old 2010</i>	<i>New 2010</i>	<i>2011</i>	<i>2012</i>	<i>Main components</i>
Simulation production	114	65	65	65	Tier-2 fraction of simulation
Group activities	32	38	49	52	Large scale skimming and slimming jobs
User activities	94	123	164	178	User analysis
Total	240	226	278	295	To summary table 3

<i>Tier-2 Disk (PB)</i>	<i>Old 2010</i>	<i>New 2010</i>	<i>2011</i>	<i>2012</i>	<i>Main components</i>
Current RAW data	0.3	0.4	0.3	0.1	On request for debugging
Real data	7.0	11.3	19.7	19.7	AOD+DESD for analysis
Simulated data	9.2	7.7	11.1	15.2	AOD+DESD for analysis
Calibration and alignment inputs	0.2	0.2	0.3	0.3	Calibration data
Group data	1.9	2.8	4.6	5.5	dESD & dAOD from group analysis
User data	1.8	1.2	1.8	2.4	Scratch space
Buffers	0.6	0.6	0.6	0.6	For simulation
Total	21	24	38	44	To summary Table 3

Want to avoid problems whenever possible!

Bryan Caron - ATLAS Computing Grid

18

Grid Infrastructure

- **Common grid services installed at CA Tier-1 and Tier-2s**
 - **LCG Compute Element via GLite middleware**
 - Computing resources
 - **Storage Element based upon dCache**
 - Disk based (tape additionally required at the Tier-1)
 - **LCG site BDII and MONitoring services**
 - Information System
 - **LCG WorkerNode client interface applications**
 - Data file staging to/from WorkerNode, ...
 - **Central distribution of ATLAS software releases and conditions databases**
- **Additional highly specialized services required at TRIUMF Tier-1**
 - Oracle (ATLAS Conditions and Tag data),
 - File Transfer Service (data movement between sites),
 - ATLAS VO-Box (ATLAS Data Management),
 - LHC File Catalogue (file location and meta-data),
 - TOP-BDII (information system), ...

Bryan Caron - ATLAS Computing Grid

21

Distributed Data Management

Bryan Caron - ATLAS Computing Grid

22

Distributed Data Management

- Distributed Data Management System
 - Baseline Service for Data Distribution and Consolidation, MonteCarlo production and Reprocessing, Data Analysis
 - Provides functionalities for Data Organization (bookkeeping) and Data Transfers
 - Data Organization based on Datasets
 - Collection of Files
 - Unit of data location and data replication, data deletion
 - Data Transfers based on Subscriptions
 - Placement policy, which DDM tries to enforce
- DDM is a Distributed Service
 - Central Catalogs, Accounting Service
 - Hold dataset definitions, subscription requests, Dataset Locations
 - Site Services, Deletion Service
 - Triggering actions to enforce subscriptions
 - Other WLCG services at sites
 - FileTransferService for data movement (at T1s), StorageElements (at T1/T2s), File Catalogs (at T1s) hold information about single files placement
 - Command Line Interfaces

How does a Physicist use the LHC Grid?

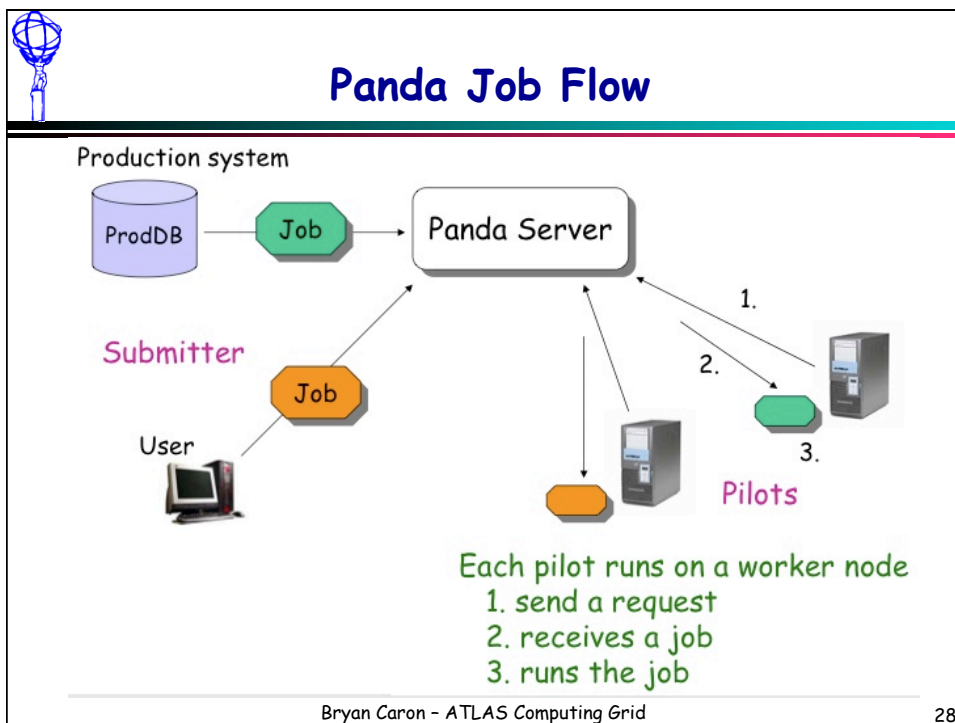

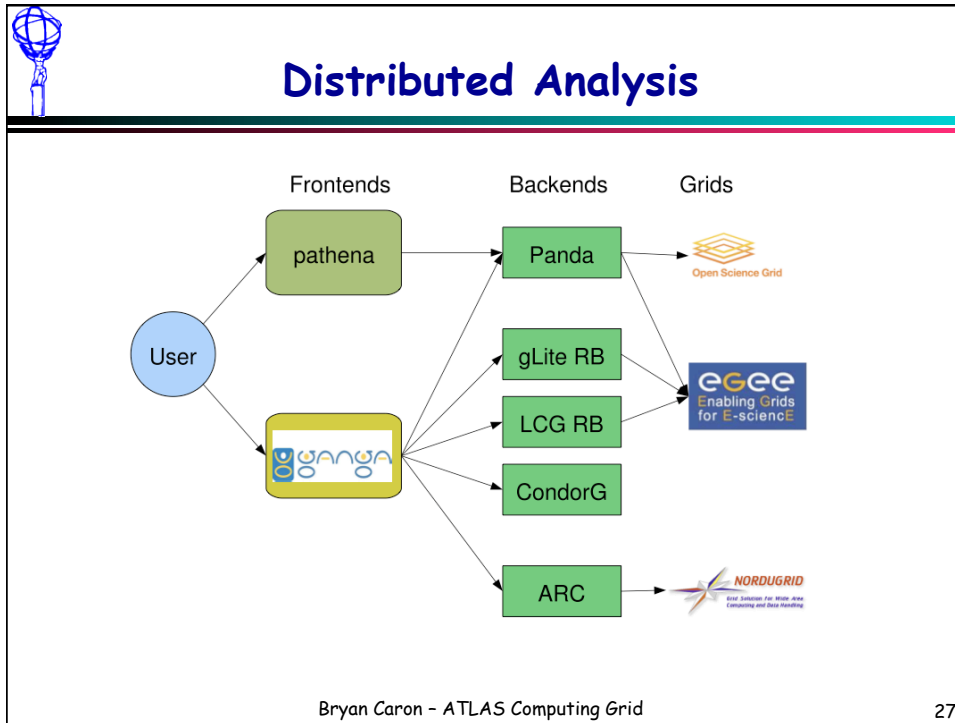

The diagram illustrates the workflow of a physicist using the LHC Grid. It shows three physicists at computers on the left, connected via pink lines to a central WMS (Workload Management System) and two UI (User Interface) stations. The WMS is connected to a CE (Computing Element) and a Batch system. The Batch system is connected to another CE and a Storage Element (SE). The SE is connected to several Worker Nodes (WN). A yellow folder icon labeled LFC (LCG File Catalogue) is also shown, connected to the Batch system and the SE. A dashed line indicates the path from the physicist to the SE.

WMS: Workload Management System
UI: User Interface
CE: Computing Element
WN: Worker Node
SE: Storage Element

LFC: LCG File Catalogue

33

ATLAS-Canada Operations

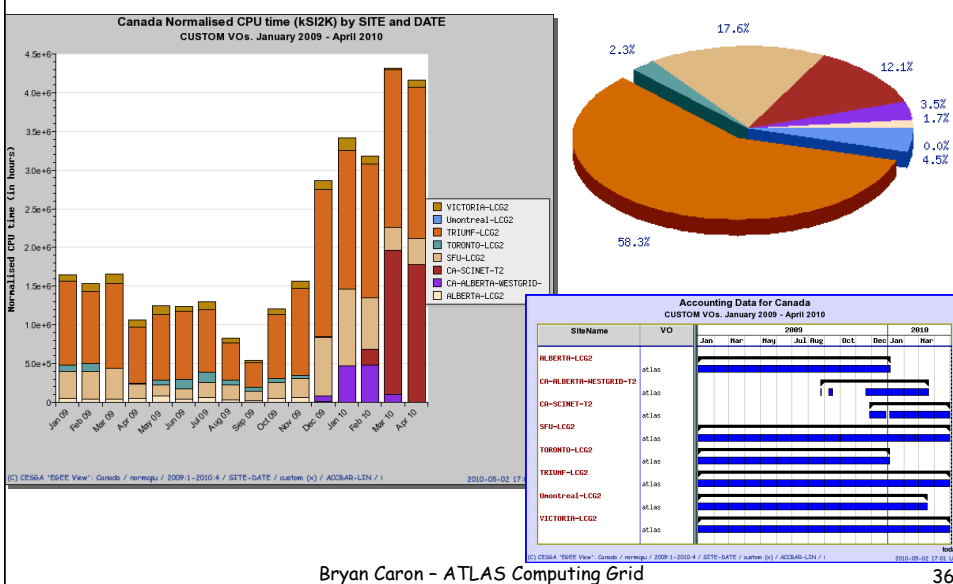

- ATLAS-Canada computing management and technical groups
 - discuss & propose policy to ATLAS investigators (e.g. sharing of resources, interaction with the HPC consortia)
 - share information on hardware and Grid middleware operations
- ATLAS Canada Cloud (Tier-1 + Tier-2s) Operations Twiki
 - Weekly grid services status reports
 - National and institutional production status
 - Local site problem reporting, tracking and solution documentation
- CA ROC (Regional Operations Centre) - est. 2009
- Site Availability and Monitoring Tests and others for diagnostics
- ATLAS Production, Analysis and Data Management Dashboards
- HEPNet Canada teleconferences
- WLCG Workshops
- Central ATLAS Tier-0/1/2/3 Jamborees (coordination)

Bryan Caron - ATLAS Computing Grid

34

Resource Usage Accounting

LHC and ATLAS Status

- Well known history of Friday September 19, 2008:
 - Faulty electrical connection between 2 magnets melted at high current during training for 5 TeV in LHC sector 34
 - Large He leak into tunnel
 - Repairs + enhanced detection / protection system installed
- ATLAS resumed global cosmics runs around May 09
- LHC beam physics data-taking period resumes November 2009
 - extended running period of approx. 18-24 months
- Nov 23: colliding beams at 450 GeV per beam
- Nov 30: new record collision energy of 2.36 TeV
 - LHC in technical stop Dec 16 - Feb 2010
- March 19: circulating beams at 3.5 TeV per beam
- March 30: colliding beams at 7 TeV centre-of-mass

Bryan Caron - ATLAS Computing Grid

37

LHC and ATLAS Status

38

LHC and ATLAS Status

- April 24/25: factor 10 increase in luminosity for 30 hour 'fill' of the accelerator
 - More than double number of collision events recorded during single run compared to all previously collected 7 TeV data
- To Date: total # collision events @ 7 TeV = 66M
- Continuing improvement in LHC beam conditions are targeting 10^4 luminosity increase over 2010 and 2011

Bryan Caron - ATLAS Computing Grid

39

User Analysis Activity

Bryan Caron - ATLAS Computing Grid

40

Conclusions and Outlook

- Numerous challenges to extract physics from PetaBytes of collected data
- Turn to the World-wide LHC Computing Grid
 - Tiered structure for data distribution and processing
 - Distributed data analysis
 - Distributed data management
 - Operations and monitoring
- ATLAS-Canada Tier-1 at TRIUMF and Tier-2 Centres
 - ATLAS-common and Canadian-specific resource allocations
 - Tier-2 Centres: Analysis and Simulation Facilities
 - Hardware resources for 2010 (and beyond) via HPC Consortia
 - establish smooth stable WLCG operations at the new facilities
 - Strong base of experience in providing the needed ATLAS and LCG services in Canada
- The beam collisions data-taking era has started, and so the future is now!
